

Prajith Selvaraj

QA Automation Test Engineer | Playwright | Python | Typescript | API testing

Brisbane, QLD, Australia | +61 406858741 | sprajith18@gmail.com | linkedin.com/in/prajithS25

Full Working Rights in Australia — MATES (Subclass 403), No Sponsorship Required | Available Immediately

PROFESSIONAL SUMMARY

QA Automation Test Engineer with around 3 years of hands-on experience designing and building **Python/TypeScript-based test automation frameworks** with **POM** From scratch for web and Windows applications using **Playwright, Pytest, Selenium, Cucumber and Pywinauto**. Experienced in **API automation** using **Playwright's APIRequest**, along with developing and maintaining reliable automated test suites. Automated **400+ functional, regression and end-to-end test cases**, achieving **~70% automation coverage**, and integrated REST API testing, SQL/SQLite validation, and Jenkins/Bamboo **CI/CD** into reliable release pipelines.

KEY SKILLS

- **Languages:** Python, TypeScript
- **Automation:** Playwright, Pytest, Selenium, Pywinauto, Cucumber
- **AI Testing:** AI Model Testing, Computer Vision, Model Output Evaluation
- **Performance & Load:** Jmeter
- **API & Database:** REST API, Postman, JSON, SQL, SQLite, Playwright APIRequestContext
- **Testing:** Manual, Functional, Non-Functional, Regression, Integration, E2E, Exploratory, Test Planning, Defect Management
- **CI/CD & Tools:** Jenkins, Bamboo, Git, Jira, Zephyr, Confluence, Bitbucket, Docker, Containerization
- **Methodologies:** Agile / Scrum, Kanban, SDLC, BDD / TDD
- **Professional:** Client & Stakeholder Engagement, Team Collaboration, Requirement Discussions, Defect Triage, Written & Verbal Communication

PROFESSIONAL EXPERIENCE

Automation Test Engineer (CL2-I)

Samsung Electro-Mechanics | Bengaluru, India

Jan 2024 – July 2026

- Designed, developed and maintained Python/TypeScript-based automation frameworks from scratch using **Playwright, Pytest, Selenium and Pywinauto** for **web (React/.NET)** and **Windows (WPF)** applications supporting AI-driven quality inspection and factory automation.
- Automated **400+ functional, NF, regression and end-to-end test cases**, achieving approximately **60% automation coverage** and reducing regression execution time.
- Developed reusable Python automation libraries for UI, desktop, API validation and Pytest reporting, improving framework scalability, maintainability and test reusability.
- Designed and automated REST API test suites using **Python Requests and Postman**, validating HTTP methods, status codes, JSON responses, business logic and backend services.
- Integrated automated test suites with **Jenkins and Bamboo** CI/CD pipelines, supporting scheduled regression execution, continuous testing and faster feedback on software changes.
- Performed SQL/SQLite database validation using SQL queries, backend data verification, data reconciliation, and negative testing to ensure application behaviour, data integrity, and system reliability.
- Validated **AI/computer vision models** for fire, smoke, person detection, cart detection, anomaly detection, training workflows, and classification by verifying datasets, frame-level predictions, and model accuracy.

- Collaborated with customers, developers, QA teams and international stakeholders to clarify requirements, demonstrate features, investigate defects, and deliver successful Agile sprint releases.
- Performed defect triage, log analysis and root-cause investigation, working with development and QA teams to improve application stability and release quality.

KEY PROJECTS

- **Centralized Monitoring Platform (CMP)** — .NET/React web application. Performed functional, UI, API and backend testing alongside AI model testing, validating computer-vision detection and classification results (fire, smoke, person detection) for reliable, production-accurate system behaviour.
- **ADAMS (Anomaly Detection & Classification System)** — WPF desktop application plus an MVC web dashboard for AI model training, anomaly detection and classification workflows. Contributed to a **TensorFlow-to-PyTorch migration**, generating baseline Excel reports (per-image results, summary metrics, class distribution) and designing UI-observable test cases using Pywinauto and WinAppDriver.

PERSONAL PROJECTS

- **AutoCraft** — Developed an internal Playwright and Pytest automation utility from scratch to record user interactions and auto-generate reusable automation scripts, improving automation development efficiency for the wider QA team.
- **Personal Portfolio Website** - <https://prajith.vercel.app/>
Implemented the Page Object Model (POM) design pattern and gained experience troubleshooting test failures, locator issues and automation errors.

EDUCATION

Bachelor of Technology – Computer and Communication Engineering

Amrita School of Engineering, Coimbatore, Tamil Nadu, India

CERTIFICATIONS

- ISTQB Certified Tester – Foundational Level (CTFL), 2026
- Master Test Automation with Playwright, 2026
- Docker Foundations Professional Certificate, 2026
- CCNAv7: Introduction to Networks – Cisco (Online), 2023
